# Allurion

PROGRAM

<sup>1</sup> The AUDACITY Study, 48-week LOCF results in mITT population. Data on File (2025)

The Allurion Gastric Balloon System (AGBS) is indicated to promote short-term limited weight loss in adult individuals with obesity between the ages of 22 years and 65 years with a body mass index (BMI)  $\geq 30$  kg/m<sup>2</sup> and  $\leq 40$  kg/m<sup>2</sup> who have had at least one unsuccessful attempt at a weight loss program. The residence time for each AGBS is variable with an average observed residence time of 15.3 weeks. The AGBS is to be used in conjunction with a moderate intensity lifestyle modification therapy program. The AGBS consists of up to two Allurion Balloons placed during a 10-month period.

**No surgery.**  
**No endoscopy.\***  
**No anesthesia.**
